EDUCATION

B.Tech in Computer Science and Information Technology
REVA University – Bangalore, KA

CGPA: 8.74
August 2022 – Present

Intermediate in Mathematics, Physics and Chemistry
Sri Chaitanya College – Anantapur, AP

CGPA: 8.54
June 2020 – April 2022

SKILLS

- **Programming Languages:** Java, Python, C++
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Frameworks:** Spring Boot, Node.js, React.js
- **Service Integration:** REST APIs, Apache Kafka
- **Cloud & Deployment:** AWS, Vercel, Render
- **Tools:** Git, GitHub, Postman, IntelliJ IDEA, VS Code, Jupyter Notebook

EXPERIENCE

Target – Bangalore, KA

February 2026 – Present

Software Engineer Intern

- Built backend services for Starlight, Target's execution management platform, supporting project planning, task orchestration, and workflow automation.
- Implemented APIs and workflow enhancements for project and task management.
- Developed Kafka integrations for analytics event publishing and cross-service communication across multiple platform applications.
- Improved platform reliability through security fixes, OAuth integration, and modernization efforts.

Aikyam – Bangalore, KA

January 2026 – February 2026

Software Engineer Intern

- Designed and developed application modules end-to-end, covering database schema, API development, and UI integration.
- Implemented CRUD operations, validations, and business logic following clean coding and best practices.
- Performed testing, debugging, optimization, and maintained documentation to ensure reliable, scalable, and maintainable modules.
- Conducted requirement analysis and documentation, translating business needs into clear technical specifications.

PROJECTS

Student Retention System – ML-Driven Web Application [Ongoing]

- Built Random Forest models to predict student dropout risk using academic performance data.
- Designed a lecture recommendation module to personalize learning support.
- Integrated ML output into a centralized student portal with dashboards for students and faculty.
- Developed a React.js frontend and a Spring Boot backend, integrating ML models for prediction services.

MockMeet.AI – AI Interview Simulation Platform – [\[Live\]](#)

- Built a Flask-based backend with modular APIs for question generation, scoring, and session handling.
- Designed a clean React frontend and optimized API communication for faster response flow.
- Implemented a scoring engine that evaluated answers across clarity, confidence, and correctness.
- Stored and retrieved session data using SQLite for persistent user history.

CERTIFICATIONS

- **Data Structures & Algorithms** – Log2Base2
- **Java** – HackerRank
- **Generative AI** – GeeksforGeeks
- **Full Stack Development** – GeeksforGeeks
- **Python Programming** – Code with Mosh

ACHIEVEMENTS

- **National Level Karate Competition** – Secured 3rd place.
